ACADEMIC & RESEARCH PROFILE

Computer Science and Engineering graduate currently pursuing an MSc in Data Science, with professional experience in software product management, quality assurance, and interdisciplinary collaboration. Building research experience in clinical image/annotation data quality, interpretable breast cancer classification, and a proposed ovarian cancer biomarker thesis. Interested in using statistical analysis, applied machine learning, and practical healthcare technologies to investigate clinically meaningful questions, with attention to interpretability and research reproducibility.

RESEARCH INTERESTS

Clinical and biomedical informatics • Applied medical AI • Clinical biomarker analysis • Diagnostic decision support • Medical imaging data • Explainable ML • Healthcare technology design and evaluation

EDUCATION

Shahjalal University of Science and Technology (SUST), Bangladesh | *MSc in Data Science* | *In progress, 2026–present*

Relevant coursework: Probability & Statistics, Advanced Machine Learning & AI, Advanced Python, High-Dimensional Data Visualization, Mathematics for Data Science, Advanced Data Structures & Algorithms.

Leading University, Sylhet, Bangladesh | *BSc in Computer Science and Engineering* | *2020–2024*

CGPA: 3.44/4.00. Academic preparation in software development, data-oriented computing, software engineering, and quality assurance.

RESEARCH & APPLIED PROJECTS

Ovarian Cancer Diagnosis Using Blood-Based Biomarkers | *Proposed MSc Data Science thesis* | *Supervisor: Dr. Nahid Sultana*

- Research direction: investigate benign-versus-malignant ovarian tumor classification using blood-based biomarkers, including CA125, HE4, and selected routine laboratory measures, subject to dataset suitability.
- Planned work includes literature review, data preprocessing, comparison of established classification methods, and evaluation of model performance and clinical interpretability. Project is at the research-planning stage; no results are claimed.

A Multimodal Dental Dataset for Predictive and Assistive Dentistry AI Models | Co-author, manuscript in preparation | Research supervision: Md Saidur Rahman Kohinoor

- Co-author on an interdisciplinary dental imaging dataset manuscript covering 1,150 periapical and panoramic radiographs, with a 21-class framework for anatomical structures, dental pathologies, and clinical status.
- Contributing to image and annotation data curation, consistency checks, and validation of image–annotation correspondence; working within a research team using CVAT and expert dental review to support future AI-assisted detection.

Interpretable Breast Cancer Classification | *Independent applied ML project* | *In progress*

- Using the UCI Wisconsin Diagnostic Breast Cancer dataset to explore benign/malignant prediction with interpretable baseline approaches and model comparison.
- Built an initial web-based landing-page prototype; developing the analysis and prediction-explanation workflow. Intended as a research demonstration, not a clinically validated diagnostic tool.

PROFESSIONAL EXPERIENCE

Agency Handy | *Product Manager* | *Mar 2025–Apr 2026*

- Led product requirements and coordinated delivery across design, engineering, and quality assurance for SaaS workflows.
- Worked on user onboarding, feature specifications, release documentation, product analytics, and feedback-driven improvements.

Technext | *Junior Product Management & Software QA* | *May 2024–Jan 2025*

- Contributed to QA, feature testing, issue documentation, release coordination, and cross-functional communication on SaaS products.

Appifylab | *Product Coordination, QA & Technical Support* | *Nov 2023–Apr 2024*

- Supported product coordination, testing, technical troubleshooting, and communication of user-reported issues to engineering teams.

TECHNICAL, RESEARCH & COLLABORATION SKILLS

Data & research: Python, tabular data cleaning and inspection, XML/image annotation review, exploratory analysis, introductory statistical and ML workflows; pandas, NumPy, scikit-learn (developing proficiency).

Software & collaboration: Jira, Trello, Notion, Figma, Git/GitHub (developing workflow), PostHog, Postman; product requirements, QA, stakeholder interviews, technical documentation, interdisciplinary teamwork.

RESEARCH DEVELOPMENT

Current priorities include strengthening reproducible Python analysis, reading and synthesizing clinical AI literature, assessing dataset suitability, and presenting model behavior and limitations to nontechnical healthcare audiences.
